

MINDCRAFT

Fable 5 Futures — All 10 Routes

Downloadable brief pack · July 2026 · Internal only

Each route is a separate PDF in this folder. Also bundled as MindCraft_Fable5_Futures_All_10.zip

R1	Imprint Ring	White paper shipped · Scenes wedge open	9/10	R01_Imprint_Ring.pdf
R2	Trading Floor Imprint	Open — vertical on R1 stack	8/10	R02_Trading_Floor_Imprint.pdf
R3	Tutor Zero-Detective OS	Closest ship — brand pain already named	4/10	R03_Tutor_Zero_Detective_OS.pdf
R4	ADHD Life Scaffold Ring	Open — tone + Imprint loop, not a medical device claim	7/10	R04_ADHD_Life_Scaffold_Ring.pdf
R5	Esports Decision Engine	Open — WORLD_VISION Roblox dimension is the bridge	8/10	R05_Esports_Decision_Engine.pdf
R6	Spice Apprenticeship Commerce	Open — brand object + ratios ontology	10/10	R06_Spice_Apprenticeship_Commerce.pdf
R7	Resident Pattern Graph	Open — port hide-correctness + misconception memory	7/10	R07_Resident_Pattern_Graph.pdf
R8	Deal Desk Imprint	Open — affective check-in agent is a seed	6/10	R08_Deal_Desk_Imprint.pdf
R9	Fog-of-War Decision School	Open — training only, not live ops	8/10	R09_Fog_of_War_Decision_School.pdf
R10	Heir Excellence Passport	Open — graph as durable identity	9/10	R10_Heir_Excellence_Passport.pdf

Recommended sequence: R3 (pays bills) → R1 Scenes wedge → pick one Ferrari story (R2 Trading or R6 Spice) for the gut punch.

Companion white paper: ../MINDCRAFT_IMPRINT_RING_WHITEPAPER.pdf

FABLE 5 COMMISSION

R1 · Imprint Ring

Short bullets. Dense detail. Same spine as First Spark Fable 5 briefs.

LANE	Futures / Hardware + Software (coordinate before build)
STATUS	White paper shipped · Scenes wedge open
WILDNESS	9/10
COMPANION	R1 white paper · futures_fable5_briefs/ · 10-routes canvas

What you're building (one sentence)

A human-development OS that turns lived days into excellence: capture the scene you're about to enter, fire a 60–180s imprint lesson tuned to the gap that will hurt you there, then seal what happened back into the mastery graph — Whoop for the body; Imprint for the mind that has to win tonight.

This is NOT

- Another course library, streak app, or meditation timer with a ring skin
- Silent always-on surveillance sold as “coaching”
- Gamified XP for adults who hate being graded
- A replacement for tutors — Imprint preloads the gap so humans teach, not detective

This IS

- Closed loop: life event → classify → diagnose → imprint → seal → graph update
- Situational mastery infrastructure — the missing category between Aura and tutoring
- Software-first Scenes (calendar + tags), then haptic ring / pendant / desk puck
- Story-physics feedback (world responds; no red X) for adult excellence cultures

North star feeling

User thinks: “It knew poker night was coming — and the number actually mattered at the table.” Not: “Cute app guessed my hobby.”

Emotional / product arc (do not reorder)

- Sense — calendar, location cluster, optional biometrics, one-tap “mark scene”
- Classify — event → domain ontology (EV, tilt, negotiation, spatial...)
- Diagnose — MindCraft graph picks highest-severity gap for THIS scene
- Imprint — 60–180s story-physics drill; haptic cue from ring optional
- Seal — post-event debrief; graph updates; population priors improve next user

Visual system

- Marketing cream / ink / gold for consumer; navy desk mode for pro verticals
- Ring as quiet object — no RGB gamer glow; nightstand next to Whoop
- Imprint card = journal paper, not dark glass; motion cinematic, not bouncy

Your deliverables

- Scenes v0 inside app: Poker / Interview / Crunch Week packs
- Calendar import + manual scene tags + sealed debrief writer into existing graph
- Haptic cue spec for partner OEM ring (Phase 2) — one button, one buzz language
- Privacy contract: no silent ambient audio; on-device first; employer never gets raw mic
- Demo matrix: 8 recurring life scenes that feel specific, not generic tips

Architecture constraints (do not fight engineering)

- Reuse questionBank.Question + ontology IDs — do not invent a parallel mastery model
- Hide-correctness (C4) during imprint; seal can be reflective without shame
- Hardware only after sealed-event retention beats generic practice retention

Priority order

- 1. Scenes software wedge (unblocks proof)
- 2. Retention experiment vs normal practice
- 3. OEM ring pilot
- 4. Own hardware + desk puck for pro desks

How to frame it

Imprint is the Ferrari body on MindCraft's tractor engine — same graph, same story-physics, now attached to the hour before the moment that matters.

Tone: warm, serious, never remedial. Read BRAND_BOOK.md + WORLD_VISION.md before UI copy.

FABLE 5 COMMISSION

R2 · Trading Floor Imprint

Short bullets. Dense detail. Same spine as First Spark Fable 5 briefs.

LANE	Futures / B2B Pro Desks
STATUS	Open — vertical on R1 stack
WILDNESS	8/10
COMPANION	R1 white paper · futures_fable5_briefs/ · 10-routes canvas

What you're building (one sentence)

Pre-open and post-session imprint packs for prop traders and junior PMs — sizing, regime recognition, and tilt protocols fired from a desk puck + optional ring, because textbook EV dies under sleep debt and desk contagion.

This is NOT

- A signal service, chatroom, or “AI that picks stocks”
- Compliance theater that logs every keystroke for HR
- Retail gambling app cosplay

This IS

- Decision-hygiene infrastructure desks will pay seat licenses for
- Probability/stats ontology mapped to trading scenes (open, news, drawdown, revenge)
- Sealed after-action: what the model said vs what you did under pressure
- Tilt circuit-breakers as first-class product, not an afterthought disclaimer

North star feeling

Trader thinks: “I got the size right because the imprint loaded before the open — not because I reread a PDF at 1am.”

Emotional / product arc (do not reorder)

- Pre-open cue (puck/ring) → 90s imprint on today's regime class
- In-session optional mark → tags emotional state without breaking flow
- Post-close seal → 3 prompts; graph updates personal tilt signatures
- Weekly desk digest for lead PM — aggregates, not raw ambient audio

Visual system

- Desk mode: charcoal + lime accent sparingly; no candy gamification
- Puck = matte aluminum, one LED for cue only
- Charts as teaching objects inside imprint — never fake live prices as the product

Your deliverables

- Trading scene taxonomy + 12 imprint packs
- B2B admin: seats, SSO stub, pack assignment
- Desk puck industrial design one-pager + BOM sketch
- Risk/ethics addendum (gambling addiction circuit-breakers)

Architecture constraints (do not fight engineering)

- No price prediction claims — mastery of decision process only
- Employer sees aggregates the trader opts into sharing
- Reuse MindCraft /recommend curriculum mode for pack sequencing

Priority order

- 1. Packs + Scenes for trading (software)
- 2. One prop desk design partner
- 3. Puck pilot

How to frame it

Desks already buy alpha. The last unpriced edge is whether the human loads the right model before the open.

Tone: warm, serious, never remedial. Read BRAND_BOOK.md + WORLD_VISION.md before UI copy.

FABLE 5 COMMISSION

R3 · Tutor Zero-Detective OS

Short bullets. Dense detail. Same spine as First Spark Fable 5 briefs.

LANE	Product (`app/**` tutor surfaces) + Engine read-only APIs
STATUS	Closest ship — brand pain already named
WILDNESS	4/10
COMPANION	R1 white paper · futures_fable5_briefs/ · 10-routes canvas

What you're building (one sentence)

An automatic pre-session brief so tutors never spend forty minutes playing detective while students politely perform understanding — exact bridge gap, last wrong patterns, recommended first move, then teach.

This is NOT

- A tutor marketplace racing to the bottom on hourly rates
- A dashboard full of vanity charts tutors ignore
- Replacement for human judgment — brief is a map, tutor steers

This IS

- The product the Brand Book already promised tutors: peer-level, precise, warm
- Zero-detective hour — session starts at the gap, not at small talk archaeology
- Parent-safe weekly signal (“where the fog is”) without grade theater
- Direct consumer of /knowledge-graph severity + /recommend curriculum chain

North star feeling

Tutor thinks: “I finally walked in knowing where Kai was stuck — and the hour was teaching, not guessing.”

Emotional / product arc (do not reorder)

- Night before — brief generates from graph + last practice outcomes
- Session open — tutor sees bridge gap + 1 suggested opener puzzle
- During — optional mark “performed understanding” when student nods too fast
- After — 60s seal updates graph; parent gets honest fog note

Visual system

- Notebook desk language already shipping on dashboard
- Brief card: mono stamps + Caveat titles; lime only on CTA
- No purple SaaS chrome — keep MindCraft paper world

Your deliverables

- Tutor brief panel (pre-session) wired to graphCache + recommend
- “Performed understanding” quick mark
- Parent weekly fog digest (email or in-app)
- Acceptance: 5 real students where tutor time-to-first-real-gap < 5 minutes

Architecture constraints (do not fight engineering)

- Tutor writes to student docs only via already-allowed / Admin-SDK paths
- Do not invent new mastery scores — use engine severity + status
- Copy never says “learners” or “leverage outcomes” (BRAND_BOOK)

Priority order

- 1. Pre-session brief MVP
- 2. Parent fog digest
- 3. Tutor marking loop

How to frame it

MindCraft sells the click and makes the human hour count. This route IS that sentence, productized.

Tone: warm, serious, never remedial. Read BRAND_BOOK.md + WORLD_VISION.md before UI copy.

FABLE 5 COMMISSION

R4 · ADHD Life Scaffold Ring

Short bullets. Dense detail. Same spine as First Spark Fable 5 briefs.

LANE	Futures / Consumer neurodiversity
STATUS	Open — tone + Imprint loop, not a medical device claim
WILDNESS	7/10
COMPANION	R1 white paper · futures_fable5_briefs/ · 10-routes canvas

What you're building (one sentence)

Context-triggered executive scaffolds and micro-mastery for high-agency neurodivergent students and adults — attached to real life scenes, never factory bells or remediation theater.

This is NOT

- A diagnosis tool, clinical ADHD treatment, or FDA-claim wearable
- Nagging reminders dressed as “accountability”
- Childish gamification that high-agency users bounce off

This IS

- Life-attached scaffolds: when the scene starts, the right next move loads
- Respectful excellence framing — ambitious users, not broken users
- Optional ring haptic as external working memory, not a leash
- Pairs with R1 Imprint; softens UX for attention variance

North star feeling

User thinks: “It caught me at the start of the spiral — and handed me one clear move, not a lecture.”

Emotional / product arc (do not reorder)

- Scene detect / user mark → scaffold card (1 move, 1 imprint, 1 escape hatch)
- Optional body double mode — silent haptic every N minutes during deep work
- Seal — what worked; never shame for unfinished lists
- Parent/partner view only if user grants — honesty without surveillance

Visual system

- Calm paper, larger tap targets, reduced motion default ON
- No red failure states; world-physics language only
- Ring black/matte — tool, not toy

Your deliverables

- Scaffold card component + 10 life scenes (homework start, inbox, commute study...)
- Reduced-motion + focus-mode settings pack
- Legal/copy pass: no medical claims
- User research script with 8 ADHD / AuDHD participants

Architecture constraints (do not fight engineering)

- Never claim to treat ADHD
- Defaults favor less notification, not more
- Reuse Imprint loop; do not fork a separate “ADHD product” codebase

Priority order

- 1. Scaffold card + focus mode
- 2. Research round
- 3. Optional haptic patterns on R1 OEM ring

How to frame it

Fixed-hour schooling is violence for these users. Attach mastery to life, or lose them.

Tone: warm, serious, never remedial. Read BRAND_BOOK.md + WORLD_VISION.md before UI copy.

FABLE 5 COMMISSION

R5 · Esports Decision Engine

Short bullets. Dense detail. Same spine as First Spark Fable 5 briefs.

LANE	Futures / Gaming + Roblox seam
STATUS	Open — WORLD_VISION Roblox dimension is the bridge
WILDNESS	8/10
COMPANION	R1 white paper · futures_fable5_briefs/ · 10-routes canvas

What you're building (one sentence)

VOD-tagged decision imprints for competitive players and coaches — expected value of peeks, utility, and economy — because mechanics get coached and probabilistic judgment under fog of war does not.

This is NOT

- Aim trainers, recoil scripts, or cheat-adjacent tooling
- A generic “gaming makes you smart” content farm
- Replacement for human coaches

This IS

- Mastery graph of decisions, not K/D cosmetics
- Scene pack per title family (tactical FPS, MOBA economy, battle royale RNG honesty)
- Coach dashboard: which decision classes are fog for each player
- Roblox / custom game API seam updates the same MindCraft graph

North star feeling

Player thinks: “That was the same math as last night’s imprint — and I took the better fight.”

Emotional / product arc (do not reorder)

- Coach or player tags VOD moment → scene class
- Imprint drills isomorphic decision with frozen numbers
- Next scrim — optional mark when pattern reappears
- Weekly decision fog map for the roster

Visual system

- Team skin overlays OK — but imprint card stays journal-clear for thinking
- Avoid neon gamer sludge; keep MindCraft seriousness

Your deliverables

- Decision ontology v0 (EV peek, utility value, economy timing, tilt after throw)
- VOD tagger lightweight UI
- One title pack end-to-end + coach digest
- Roblox sample call: conceptId + outcome → graph

Architecture constraints (do not fight engineering)

- No cheats, overlays that read enemy memory, or ToS-breaking hooks
- Math frozen from bank; skin is the game world
- Coordinate Roblox seam with Engine lane if new endpoints needed

Priority order

- 1. Decision ontology + one title pack
- 2. Coach digest
- 3. Roblox / custom game webhook sample

How to frame it

Orgs already pay analysts. A mastery graph of decisions is a new staff member that never sleeps.

Tone: warm, serious, never remedial. Read BRAND_BOOK.md + WORLD_VISION.md before UI copy.

FABLE 5 COMMISSION

R6 · Spice Apprenticeship Commerce

Short bullets. Dense detail. Same spine as First Spark Fable 5 briefs.

LANE	Futures / DTC + Learning (wildest tangent)
STATUS	Open — brand object + ratios ontology
WILDNESS	10/10
COMPANION	R1 white paper · futures_fable5_briefs/ · 10-routes canvas

What you're building (one sentence)

Sell curated spice kits whose labels are story-lessons; the app unlocks ratio and chemistry mastery so cooks stop copying steps and start cooking free — tractor company ships a kitchen brand because why not.

This is NOT

- Another recipe SEO blog with affiliate links
- “Edutainment” spice rack with no real mastery loop
- Cultural appropriation kits without origin stories and fair sourcing

This IS

- Physical goods + First Spark interest matching (cooking) + ratios/measurement concepts
- Each tin = a chapter: origin story, ratio puzzle, sealed cook debrief
- Diaspora-respectful sourcing narrative; Katha voice on the label
- Gateway drug into MindCraft for adults who swear they’re “not math people”

North star feeling

Cook thinks: “I adjusted the masala by ratio — and dinner proved the algebra.”

Emotional / product arc (do not reorder)

- Unbox → QR → story of the spice route (not a worksheet)
- Ratio imprint before cook (salt %, dilution, scaling a feast)
- Cook → seal: what you changed and why
- Next kit unlocks when graph shows ratio fluency rising

Visual system

- Packaging: paper, ink, gold foil sparingly — kitchen-counter beautiful
- App skin: warm paper, steam-not-neon
- No cartoon vegetables

Your deliverables

- 3 SKU kit concepts (origin, ratios taught, price)
- Label copy pack (BRAND_BOOK Katha rules — no UI words on story side)
- App flow: scan → imprint → seal
- Sourcing ethics one-pager

Architecture constraints (do not fight engineering)

- Food safety / labeling compliance per ship region
- Math frozen; recipes can vary as the “world”
- Do not block core ACT product engineering on DTC logistics

Priority order

- 1. One kit concept + app scan flow mock
- 2. Micro-batch pilot (50 units)
- 3. Decide if brand is MindCraft Kitchen or separate label

How to frame it

Recipes teach obedience. Ratios teach freedom. Sell the tin that teaches freedom.

Tone: warm, serious, never remedial. Read BRAND_BOOK.md + WORLD_VISION.md before UI copy.

FABLE 5 COMMISSION

R7 · Resident Pattern Graph

Short bullets. Dense detail. Same spine as First Spark Fable 5 briefs.

LANE	Futures / Med ed (new ontology domain)
STATUS	Open — port hide-correctness + misconception memory
WILDNESS	7/10
COMPANION	R1 white paper · futures_fable5_briefs/ · 10-routes canvas

What you're building (one sentence)

Case imprint before clinic for med students and residents — a pattern-recognition graph with hide-correctness debriefs so rare presentations aren't forgotten between rotations and shame culture can't hide gaps.

This is NOT

- A diagnostic medical device or treatment recommender for real patients
- Public leaderboards that weaponize shame
- USMLE content dump without a mastery model

This IS

- Training-only pattern graph: presentations → ingredients → common misses
- Hide-correctness diagnostics already proven on MindCraft C4 — port the ethic
- Hospital cohort seats; program directors buy readiness, not vibes
- Sealed after-clinic reflection without attending humiliation

North star feeling

Resident thinks: “I saw that rash pattern in last night’s imprint — and I didn’t freeze.”

Emotional / product arc (do not reorder)

- Night before clinic — 3 case imprints matched to rotation
- Optional mid-day mark: “saw this, unsure”
- Post-clinic seal — private
- Program view: cohort fog by presentation class (no individual shame feed)

Visual system

- Clinical calm: paper white, navy structure, no playful lime overload
- Cases read as vignettes, not multiple-choice carnival

Your deliverables

- Domain ontology sketch (10 presentation families) — separate from ACT IDs
- Hide-correctness case player reuse plan
- Pilot with 1 residency program champion
- Legal: training simulation disclaimers

Architecture constraints (do not fight engineering)

- Never advise on live patients
- New canonical IDs — do not overload ACT concept slugs
- Coordinate Engine lane before any ML schema expansion

Priority order

- 1. Ontology sketch + 20 cases
- 2. Program pilot design
- 3. Cohort fog dashboard

How to frame it

Licensure + patient stakes = extreme WTP. Shame is the competitor — remove it.

Tone: warm, serious, never remedial. Read BRAND_BOOK.md + WORLD_VISION.md before UI copy.

FABLE 5 COMMISSION

R8 · Deal Desk Imprint

Short bullets. Dense detail. Same spine as First Spark Fable 5 briefs.

LANE	Futures / Founder & sales excellence
STATUS	Open — affective check-in agent is a seed
WILDNESS	6/10
COMPANION	R1 white paper · futures_fable5_briefs/ · 10-routes canvas

What you're building (one sentence)

Pre-call imprint and post-call seal for founders, AEs, and family-office negotiators — concessions, BATNA math, and emotional tells — because theory collapses under social pressure and postmortems are currently vibes.

This is NOT

- A creepy call recorder that grades your personality for your boss by default
- Script robots that make humans sound like SDRs from hell
- Generic “confidence” coaching

This IS

- Negotiation ontology: BATNA, ZOPA, concession ladders, time pressure, social proof traps
- Pre-call 90s imprint; post-call seal with optional transcript user pastes
- Affective check-in agent extended: stress softens target_mastery (already in ML)
- One saved point on a term sheet pays for a decade of seats

North star feeling

Founder thinks: “I didn’t give away the board seat — the imprint named that trap at 8am.”

Emotional / product arc (do not reorder)

- Calendar: “Series A call” → pack assigned
- Imprint — one number (walk-away) + one social pattern
- Call happens in the real world
- Seal — what moved; graph updates concession habits

Visual system

- Executive paper: quiet, expensive whitespace, navy rules
- No startup-gradient sludge

Your deliverables

- Negotiation ontology v0 + 15 imprint packs
- Calendar → pack rules
- Optional paste-transcript seal assistant
- Family-office vs startup pack variants

Architecture constraints (do not fight engineering)

- Recording only with explicit consent; default is manual seal
- No employer forced personality scoring
- Keep math/finance numbers frozen when sourced from bank items

Priority order

- 1. Packs + calendar rules
- 2. Seal assistant
- 3. B2B seat SKU

How to frame it

Negotiations are exams with money. Treat them like MindCraft treats ACT — map the gap, imprint, seal.

Tone: warm, serious, never remedial. Read BRAND_BOOK.md + WORLD_VISION.md before UI copy.

FABLE 5 COMMISSION

R9 · Fog-of-War Decision School

Short bullets. Dense detail. Same spine as First Spark Fable 5 briefs.

LANE	Futures / Institutional training
STATUS	Open — training only, not live ops
WILDNESS	8/10
COMPANION	R1 white paper · futures_fable5_briefs/ · 10-routes canvas

What you're building (one sentence)

Scenario packs with sealed after-action graphs for first responders, junior officers, and pilots in training — readiness scores for uncertainty mastery, not public letter grades.

This is NOT

- A combat targeting system or live operational tool
- Public ranking boards that destroy psychological safety
- Hollywood “tacticool” branding

This IS

- Institutional sim layer on MindCraft pathfinder + outcomes
- Fog scenarios: incomplete info, time pressure, conflicting reports
- Readiness credential portable across rotations
- After-action seal private by default; unit sees cohort fog

North star feeling

Trainee thinks: “I recognized the incomplete-info pattern — and I called for the right pause.”

Emotional / product arc (do not reorder)

- Briefing scenario imprint
- Sim run (partner sim or paper tabletop)
- Sealed after-action — decisions tagged to ontology
- Readiness map updates; instructor assigns next fog class

Visual system

- Institutional serious: deep field optional, high contrast, zero cartoons
- Clear classification banners: TRAINING ONLY

Your deliverables

- Uncertainty ontology v0 (info incompleteness, time, authority conflict...)
- 2 tabletop scenarios + imprint/seal flow
- Instructor cohort fog view
- Procurement one-pager for training orgs

Architecture constraints (do not fight engineering)

- Training simulation only — hard boundary in copy and contracts
- New domain IDs; coordinate Engine
- Export controls / sensitive content review before any military marketing

Priority order

- 1. Ontology + tabletop pilot
- 2. Instructor view
- 3. One training-org design partner

How to frame it

Institutions already buy sims. A portable mastery credential for decisions under fog is new.

Tone: warm, serious, never remedial. Read BRAND_BOOK.md + WORLD_VISION.md before UI copy.

FABLE 5 COMMISSION

R10 · Heir Excellence Passport

Short bullets. Dense detail. Same spine as First Spark Fable 5 briefs.

LANE	Futures / Family office + immigrant professionals
STATUS	Open — graph as durable identity
WILDNESS	9/10
COMPANION	R1 white paper · futures_fable5_briefs/ · 10-routes canvas

What you're building (one sentence)

A portable mastery passport across domains for next-gen family-office heirs and immigrant professionals rebuilding careers — imprint packs for boardrooms and new countries, because credentials don't travel and private tutors don't scale.

This is NOT

- A vanity NFT of certificates
- Western-savior “fix the immigrant” branding
- Replacement for real licensure where law requires it

This IS

- Durable MindCraft graph as cross-border excellence identity
- Packs: board literacy, personal finance, civic systems, interview/scene imprint
- Family office succession without theater — honest fog maps for principals
- Immigrant speed path: map what transfers, imprint what doesn't

North star feeling

User thinks: “My map came with me — and the new country's boardroom pack loaded overnight.”

Emotional / product arc (do not reorder)

- Intake — what domains matter in the new arena
- Gap scan (confidence + probes) seeds graph
- Imprint packs weekly tied to real calendar (board dinner, visa interview...)
- Passport view — shareable mastery aggregates, user-controlled

Visual system

- Passport metaphor done quietly — paper booklet UI, not crypto chrome
- Multilingual later; English v0 with respectful localization plan

Your deliverables

- Passport share view (user-gated aggregates)
- 2 pack lines: Family Office Heir + New Country Professional
- Principal digest for family offices
- Trust/safety: who can see what

Architecture constraints (do not fight engineering)

- User owns share keys — no silent family surveillance
- Expand ontology carefully (finance/civic) with Engine coordination
- Never claim to replace regulated credentials

Priority order

- 1. Shareable passport view on existing graph
- 2. One pack line end-to-end
- 3. Family-office design partner

How to frame it

Excellence is currently gossip. Make it a map you can carry.

Tone: warm, serious, never remedial. Read BRAND_BOOK.md + WORLD_VISION.md before UI copy.
