

Projecting Impact in the Next Economy

Ted Carling, Co-Founder & CFO

July 15th, 2026

Questions for the group

Who is this for?

- Future business leaders who believe profit and purpose are not mutually exclusive.

Why are you here?

- To learn how to measure what matters and how that will become your greatest competitive advantage.

The Ecotone Journey

How did we get to now?

- **2015 - 2018:** Testing and assembling to the tool for SROI and interviewing customers
- **2019 - 2021:** Running and refining the methodology, building the team, and moving from non-profit service providers to Community and Corporate Foundations into the CSR and Supply Chain teams. (oh and COVID. Now we're international and work virtually? cool!)
- **2022 - 2024:** Scaling, landing and expanding within large multinational corporations
- **2025:** Working through the market correction in the Impact Strategy Design sector

The Problem: Missing Pricing Information

An error of Omission, not Commission

- In a market system the price of products and services are dictated by supply and demand.
- But, if the commons (society and the environment) are seen as “free” inputs and/or places to throw waste “away”, prices are held artificially lower as they are used as a value stores that companies can pull from and capture the difference in cost and make short term gains.
- Which is fine, until the tipping point is met, and the surplus of “free value” is consumed and the degradation of the commons creates increasing input costs, buying friction, and prolonged economic outlook uncertainty. Eventually bringing the Sum value of the system to Zero.

<https://drought.unl.edu/dustbowl/>

The Shift: Price in Externalities

Making the Invisible, Visible

- Through understanding outcomes and projecting the monetized value being created and to whom it accrues, companies can see the complex medium and long-term risks and model investment strategies to mitigate them.
- Innovators can also identify the opportunities for revenue in managing externalities for others in the system.
- So, if you bought a currently operating business, beyond digitally transforming it and applying MBA fundamentals to capture more of the current market, how would you also push it into the next paradigm?

The Ecotone Way: Our Methodology

1. **Theory of Change:** We map the causal path from investment to impact. What is our goal and what is our strategy for moving which levers to get there?
2. **Stakeholder Identification:** We ask, "Who is affected by this work?". This identifies who our clients are but also potential strategic partners, funders, and customers.
3. **Logic Model:** Using the standard framework we map out the causal links between the activities and the outcomes and systemic impacts. So we can see tactically, how value and externalities are being created and how much is flowing to whom.
4. **Outcome Valuation:** We use evidence-based research to assign a monetary value to social and environmental outcomes. We translate the language of sociology into finance.
5. **Cost (Investment) Summation:** We review the cost structure and assign costs to the programs. Isolating which costs are linked to the program and not general operating costs.
6. **SROI Calculation:** We distill the complexity into a clear, powerful metric: Social Return on Investment. This efficiency metric represents a lot of information but give leaders a quick direction indeator.

The Process

Social Return on Investment

A Benefit-Cost Ratio: This is the value generated for every dollar invested. It is calculated as:

$$\frac{\text{Social + Environmental + Economic Benefits}}{\text{Investment}}$$

This is the definition used by Ecotone to communicate value creation. The Social Return on Investment (SROI) number is each investee's total monetized impact divided by their total annual cost.

Deep Dive Case Study

Rebuilding Together DCA

Repairing homes
and rebuilding lives.
See our impact.

United Nations Sustainable Development
Goals addressed with this program:

The Social Impact of Rebuilding Together DC • Alexandria

This impact value map shows the median cost per household receiving Safe and Healthy Homes repairs and modifications delivered by Rebuilding Together DCA, and the projected benefits generated by the average mix of repairs and modifications in FY2022.

Projected Social Return on Investment

\$1 → \$4.38

For every \$1 dollar invested in the median amount of home repairs and modifications by Rebuilding Together DCA, there is a projected social return of \$4.38. This value is being realized through increased economic security and independence, increased physical health and safety, improved mental health, improved energy conservation, and increased community connection.

Logic Model

Dimensions of Impact

WHAT:

Rebuilding Together DCA provides critical home repairs and modifications at no-cost to homeowners to address home and safety health hazards and help residents lead healthy, safe lives in their homes.

WHO:

Serving low-income homeowners in DC and Alexandria including the elderly, persons with disabilities, veterans, and families.

HOW MUCH:

The Rebuilding Together DCA team includes 13 staff members and a network of 1,200+ contractors and volunteers. Annually 300+ households are served.

CONTRIBUTION:

Financial barriers and home health hazards influence whether a homeowner can remain safely and affordably in their home.

IMPACT RISK MITIGATION:

Rebuilding Together DCA's home repairs and modifications are designed to address critical needs on the Safe and Healthy priorities and HUD Healthy Home Rating Systems hazards checklist, which comprehensively ensures that homeowners live in safe, accessible, and healthy homes. Services are at no-cost to homeowners, reducing the financial burden on homeowners.

Key Performance Indicators

Improvements in the following areas:

- ### Scale KPIs
- # of people benefiting (disaggregated by race/ethnicity, age, gender, disability, veteran)
 - # of volunteers and volunteer hours

- ### Quality KPIs
- % of residents reporting improved physical and mental health
 - % reduction in residents who fall and # of falls
 - % of residents who age in place that would not have otherwise done so
 - % reduction in respiratory health / % reduction in asthma related hospital visits

Letter from Our CEO

With such strong correlations between safe, affordable housing and improved student achievement and adult job productivity, increased financial security, and enhanced mental and physical well-being, our work is critical to maintaining stable housing conditions for many families and individuals in our region.

With the help of everyday citizen volunteers, skilled tradespeople, and the support of funding partners, we provide housing security for hundreds of low-income homeowners every year. Our free home repair services help create safe, healthy, and equitable communities, allowing neighborhoods to be economically, socially, and culturally diverse.

Thank you for being a part of our rebuilding mission. Together, we are changing lives by creating safe, healthy homes for our neighbors.

With gratitude,

Katharine Dixon
CEO, Rebuilding Together DCA

Theory of Change

Providing no-cost home repairs and modifications to low-income homeowners in the DC/Alexandria area to create safe homes and communities.

Rebuilding Together DCA addresses social determinants of health through its Safe and Healthy Homes program:

Economic Stability

Addressing expenses, debt, wealth

Neighborhood and Physical Environment

Addressing housing, safety, mobility

Community and Social Context

Addressing stress, social integration

Health Care System

Addressing home health hazards

Education

Addressing student achievement via safe and stable housing

Food

Addressing safe storage/preparation, food insecurity

Testimonials

"I love my front doors now [with] sunshine coming in through my house allows me to feel a peace of mind. Thank you so much for everything."

*"I no longer am concerned about falling or going up and down stairs. I can **enjoy** being alone."*

"Rebuilding Together DC Alexandria has provided many services. I feel blessed to know help is only a phone call away. Shortly after the phone call, comes the repairs/replacements or whatever is needed to resolve the reason for the call. Thank you RTDCA for all your help!"

*"Plumbing repairs among other adjustments have greatly improved **livability** of my home. Rebuilding Together repair services were delivered without a hitch."*

"Repairs were made to fix drafts and other things that I would not have been able to afford on my own and helped me be able to stay at home."

Social Determinants of Health are drawn from the Kaiser Family Foundation.

Projected Social Return on Investment

\$1 → \$4.38

Data from Rebuilding Together DCA’s Safe and Healthy Homes program was combined with Ecotone’s proprietary evidence base to project the social value generated. The urban regeneration housing investments drove increased economic security and independence, increased physical health and safety, improved mental health, and increased community connection.

Strategic Roadmap and Outcomes Analysis

Ecotone inventoried Rebuilding Together DCA's strategy's various components to align with the existing evidence base. Creating a strategy map showing the flow of inputs (resources), activities conducted with those inputs, and how those inputs and activities can generate positive short-, intermediate, and long-term outcomes that eventually lead to impact.

Logic Model

Inputs

Rebuilding Together

- Staff and board members
- Vendors, contractors and volunteers
- Materials for repairs and modifications

Funding

- Sponsors
- Donations
- Grants
- In-kind support

Partnerships

- Government agencies
- Non-profit organizations
- Community based organizations
- Skilled trade organizations

Homeowners

- Low-income DC and VA residents

Activities

Safe and Healthy Homes

- Apply 25 Safe and Healthy priorities
- Home repair and home modification work provided free of charge

Evaluation

- Surveying and data collection

Communications

- Public outreach and fundraising
- Recruit and coordinate volunteers and contractors

Outputs

- # of applications received
- # of homes served
- # of repairs and modifications by type
- # of repairs per home
- # of people benefiting
- # of volunteers
- \$ raised
- \$ spent on repairs and modifications
- \$ of in-kind support
- # of strategic partners leveraged

Short-term Outcomes

- ↓ contaminants, pest, safety and home health risks
- ↑ understanding of home health risks
- ↑ temperature control
- ↑ accessibility
- ↑ cleanliness
- ↑ ability to perform ADLs
- ↑ engagement in community

Intermediate Outcomes

- ↑ safety and home security
- ↑ self-reported health status
- ↓ stress
- ↑ ability to remain in home
- ↑ financial security
- ↑ home value
- ↑ energy efficiency
- ↑ pride in home and communities
- ↑ job productivity
- ↑ housing tenure in community
- ↑ health
- ↑ educational attainment

Long-term Outcomes

- ↑ health and wellbeing
- ↓ medical visits
- ↑ quality of life
- ↑ sense of self-efficacy and confidence
- ↑ wealth
- ↑ financial resiliency
- ↓ risk of foreclosure
- ↓ GHG emissions
- ↑ neighborhood cohesion
- ↓ displacement / homelessness
- ↑ future civic engagement
- ↑ area property values
- ↑ wealth transfer

Impact

- ↑ self-sufficiency
- ↑ protection of affordable, safe housing
- ↑ community resiliency and stability
- ↓ racial disparities and inequality in housing quality, property values, wealth and health status
- ↑ community safety

↑: Homeowners ↑: Volunteers ↑: Neighborhood ↑: Children of homeowners

Projected Costs

Costs are reflected in two scenarios: the average and median cost per home. Costs were estimated using the ingredients method, designed to capture all the resources contributed to delivering the repairs and modifications to homeowners. This includes the direct expenditures per home (materials and labor paid for), the average admin and fundraising per home, the in-kind value, and value of skilled and general volunteer hours contributed per home. Costs are assumed to be incurred within a single year for each project. The median value was used for the SROI visualization. The table below shows the average and median investment per home from FY2018 to FY2022.

The average total investment per home is greater than the median total investment per home, showing that some projects are more expensive than others. Noting this potential spread of project costs, the median value was used in the visualization to show a more representative view of the typical project. There is variation in estimated in-kind volunteer labor and materials, largely due to the Covid-19 pandemic. Prior to the pandemic, the estimated in-kind volunteer labor and materials value per home is greater than 2020 and the years following. The pandemic limited how many volunteers could participate at a given time and at a given home, leading to a lower in-kind contribution.

Average and median costs per home from FY2018 to FY2022

Scenario	Average Direct Cost per Home	Median Direct Cost per Home	Admin + Fundraising Expenses per Home	Estimated In-Kind Value per Home	Average Total Investment per Home	Median Total Investment per Home
FY2018	\$6,650	\$6,119	\$1,566	\$5,039	\$13,256	\$12,724
FY2019	\$4,274	\$3,670	\$1,672	\$4,749	\$10,696	\$10,091
FY2020	\$4,535	\$3,392	\$1,026	\$626	\$6,187	\$5,044
FY2021	\$5,023	\$4,232	\$889	\$161	\$6,073	\$5,282
FY2022	\$5,393	\$4,536	\$1,153	\$977	\$7,523	\$6,670

**The median total investment per home for FY2022 was used in the SROI visualization on page 4. and is the cost used in the SROI figure communicated throughout this report.*

Projected Outcomes

The table below shows the long-term outcome benefits projected for Rebuilding Together DCA’s Safe and Healthy Homes repairs and modifications. These outcomes are referred to as the marginal benefit (the cost/benefit of an event occurring multiplied by the likelihood of that cost/benefit occurring). Multi-year benefits are presented here as a net present value (NPV).

Monetized Outcomes

#	Category	Outcomes	Average Benefit per Home (NPV at 3%)
1	Independence	Increased likelihood of aging in place	\$10,442
2	Independence	Increased ease of conducting activities of daily life (ADLs)	\$1,223
3	Independence	Reduced cost to caregiver from avoiding having to miss work, cutting back to part-time hours, etc.	\$464
4	Economic Security	Increased home value appreciation	\$1,624
5	Economic Security	Cost savings from energy efficiency	\$269
6	Economic Security	Reduced GHG emissions from energy efficiency	\$49
7	Physical Health and Safety	Reduced risk of fall leading to hospitalization due to home modifications (e.g., ramps, grab bars, etc.) - Avoided hospital admission and emergency department (ED) costs	\$4,175
8	Physical Health and Safety	Reduced risk of fall leading to death due to home modifications (e.g., ramps, grab bars, etc.)	\$3,286
9	Physical Health and Safety	Improved physical health - reduced hospitalizations	\$1,996

#	Category	Outcomes	Average Benefit per Home (NPV at 3%)
10	Physical Health and Safety	Reduced risk of fall leading to non-hospitalization due to home modifications (e.g., ramps, grab bars, etc.) - reduced future ADLs	\$564
11	Physical Health and Safety	Improved physical health from reduced exposure to lead, asbestos, radon - for kids	\$69
12	Physical Health and Safety	Improved respiratory health from improved ventilation and air quality - avoided asthma related hospitalizations, ED visits and reduced medication use for adults	\$30
13	Physical Health and Safety	Increased productivity from reduced asthma symptoms	\$18
14	Physical Health and Safety	Increased safety - reduced fire death rate	\$17
15	Physical Health and Safety	Improved health and earnings from avoided carbon monoxide (CO) poisoning	\$6
16	Physical Health and Safety	Improved respiratory health - children - avoided loss of quality-adjusted life year (QALY)	\$4
17	Physical Health and Safety	Improved respiratory health - children - avoided health care expenditures from asthma symptoms	\$2
18	Physical Health and Safety	Improved respiratory health - children - avoided missed work days for parents	\$0.58
19	Physical Health and Safety	Improved physical health from increased temperature control	\$0.07
20	Physical Health and Safety	Increased safety - reduced fire injury rate	\$0.02
21	Mental Health	Improved mental health (due to reduced stress and increased thermal comfort)	\$4,526
22	Mental Health	Improved mental health from volunteering	\$22
23	Community Connection	Reduced crime and increased sense of pride in community	\$429
Total			\$29,220*

*Figures in visualization on page 4 are rounded, resulting in slightly altered total value.

Example Calculation and Evidence to Estimate an Outcome's Value

Each outcome estimated on page 6 has a detailed estimation process similar to the below.

Improved physical health from reduced exposure to lead - for kids

Projected Marginal Benefit: **\$15**

Estimation Calculation: $0.09 * 0.07 * \$2,400$

Figure: 0.09

Type: Proportion of households with kids

Notes: In FY22, 9% of households served had children. (Rebuilding Together FY22)

Source: Rebuilding Together DCA - Level of Evidence: N/A

Figure: 0.07

Type: Proportion of homes receiving painting and wall repair that could cover lead paint issues

Notes: In FY22, 7% of homes received paint or wall repairs.

Source: Rebuilding Together DCA - Level of Evidence: N/A - Fact

Figure: \$2,400

Type: Cost of lead poisoning

Notes: For every dollar invested in lead poisoning prevention, there is a savings of \$17 to \$221 in future costs (5% health, 71% earnings, 11% tax revenue, 13% special ed, .5% crime) — a net savings of \$181 billion–\$269 billion. The major source, lead-based paint, is by no means the only source of dangerous lead exposures among children. If a similar distribution of lead exposures or high and low BLLs are found from both lead-based paint and other types of lead hazards, a rough adjustment for other major sources of lead exposures on these benefits decreases the final benefit range by 30%, because lead-based paint represents about 70% of childhood exposure to lead. This leads to a return of \$12–\$155 for each dollar invested in lead paint hazard control. (Gould, 2009). If of the total Rebuilding Together project budget at least \$200 are spent on average in lead abatement (directly or indirectly affecting lead exposure) - the resulting savings amounts to at least \$2400.

Source: Gould, 2009 - Level of Evidence: 4.

Corporate Case Studies

Example: Social Value is Business Value

The Model Linking Digital Equity in Society and CDW Performance

Building the case for pivoting corporate CSR strategy means showing how the strategy can benefit society while benefiting the company as well

Example: Strategic Roadmap and Outcomes Analysis

Strategy roadmapping began with a rigorous evidence review, combined with CDW’s existing activities, to build a strategy roadmap. Activities to support digital equity could be broken down into building blocks each with their own set of impacts.

Building Blocks to Digital Equity			
Technical and Personal Support	Advancement		
	Workforce		
	Education		
	Access	Self-Concept	

Reading from left to right, the strategy map is outlined in a logic model form, showing CDW’s inputs (resources), activities conducted with those inputs, and how those inputs and activities can generate a flow of positive short, intermediate and long-term outcomes which eventually lead to impact.

Strategy Roadmap

						
Inputs	Activities	Outputs	Short-term Outcomes	Intermediate Outcomes	Long-Term Outcomes	Impact
· Funding · Staff time / volunteer time · Technology · Partners · Overhead	· Access – ensure students have access to physical hardware, software, and connectivity · Self-concept nurturing · Education – support STEAM and digital literacy education · Workforce development – build a diverse, inclusive, and equitable workforce in the technology industry · Technical and personal support	· # of students ‘enabled’ with hardware, software, connectivity and basic skills · # of students reached, served, and completing respective programs (disaggregated by age, race/ethnicity, gender, geography, etc.) · # of students starting and completing programs and entering a new job, either in STEAM or in position that utilizes digital skills beyond what the student previously had	Increased Digital Inclusion:	Increased Digital Equity:	Increased Social Equity:	· Shared prosperity · Reduced disparities · Increased quality of life · Personal empowerment · Self-actualization
			· Increased awareness of digital tools, their functions, their usefulness · Increased access to physical hardware, software, connectivity, digital literacy education, skill building opportunities · Growth and increased quality of STEAM and digital literacy education · Increased access to learning digital skills and opportunities for career path development · Increased digital self-sufficiency and digital participation · Improved means of technical support	· Increased digital capacity · Increased confidence in utilizing digital tools · Growth of the technologist mindset, Improved attitude and interest towards digital skills · Increased application of digital capacity skills on a regular basis · Increased pursuit of jobs and/or education using digital skills	· Increased civic and cultural participation · Increased employment and earnings from in-demand skills, technological know-how, STEM training, etc. · Increased educational attainment in IT or due to being tech-enabled · Increased access to essential services (health care, public services, transportation, etc.) · Improved physical, mental, emotional health	
			Outcomes Specific to CDW			
			· Increased trust from customers · Strengthened reputation	· Increased diverse talent · Increased productivity		

Operationalizing the Strategy Roadmap

Once the strategy roadmap (previous slide) is developed, the key metrics for managing the strategy are identified by the source of the metric (Table 3).

Table 3: Portfolio Level Metrics				
Recommended Metrics		Future Metrics for Consideration		
CDW Outputs	Philanthropic Partner Outputs	CDW Outcomes*	Non-Profit Partner Outcomes (customers)	Philanthropic Partner Outcomes (grantees)
\$ of funding by CDW	# of students 'enabled' with hardware, software, connectivity and basic skills	Turnover rate	Reduced hrs of manual tasks	Increased stability tech supplier relationships
Hours of pro-bono	# of students reached, served, and completing respective programs (disaggregated by age, race/ethnicity, gender, geography, etc.)	Productivity (output/employee)	Increased breadth and/or depth of people reached due to capacity	Reduced turnover in funders
# of employees engaged	# of students starting and completing programs and entering a new job, either in STEAM or in position that utilizes digital skills beyond what the student previously had	Rates of absenteeism - sick days, etc.	Budget savings	More effective use of technology (reduced hrs spent troubleshooting)
# of PPM partners worked with	# of philanthropic partners granted to	Customer retention rate	Increased breadth and/or depth of people reached due to new budget availability	
\$ of funding contributed by PPM partners	# of philanthropic partners supported (includes those granted to but also those receiving other means of support)	# of marketing pieces/media impressions generated	Reduced burnout	
# of devices donated	# of philanthropic partners trained	% job applicants are increasingly diverse	Increased device availability	

3M The Social Return on Investment

Data from 3M and Ecotone's proprietary evidence base are combined to project social value of the portfolio. Showing 3M's Racial Equity Community Commitment returns positive social value for the participants and sociality at large. The STEM and workforce development investments are creating social value largely through the increased earnings of the individuals. While the wider community investments are generating many other positive impacts and protective effects.

Projected Social Return on Investment

\$1 → \$2.93

For every \$1 invested in the 3M Racial Equity Community Commitment portfolio, there is a projected \$2.93 in social value generated. This value is being realized through increased lifetime earnings, avoided justice system involvement, avoided public assistance use, improved health, increased assets, increased job benefits, improved quality of life, reduced school costs, and increased employee retention.

Total Investment in 2021
\$11,999,770

Strategic Roadmap and Outcome Analysis

Portfolio Strategy Map & Logic Model

Ecotone's first step was to help the 3M team inventory their portfolio strategy and organize into a map. The strategy map, also known as a Logic Model, shows 3M's inputs (resources), activities conducted with those inputs, and how those inputs and activities can generate a flow of positive short, intermediate and long-term outcomes which eventually lead to impact.

↑ : K-12 Students and Adult Learners ↑ : 3M and its employees ↑ : Community

Impact Portfolio Theory

Steps for Impact Portfolio Theory

1. Define the goal of the portfolio
2. Value the interventions that could be in the portfolio
3. Model potential intervention mixes
4. Optimize portfolio to get the maximum amount of impact for the minimum amount of risk
5. Monitor the portfolio to see if it's meeting expectations, and then make changes to the intervention mix when market and community conditions warrant a change

Expanded Inventory of Tools for Impact Portfolio Theory

1. Ask the folks that live in a place what they want/need

2. Research which mix of outcomes would meaningfully move these folks forward

3. Understand the Logic Model risks of each intervention type

4. Understand the average costs to implement effective interventions

5. What's the **market size** of a problem in an area?

6. How much **market share** of the problem are you addressing or want to be?

7. Who are your **investing partners**?

8. Find and scale proven solutions providers locally

9. Track dose and fidelity KPIs

1.

Ask the folks that live in a place what they want/need

Don't "fix" what's not broken, support the stated wants/needs/ of the community.

2.

Research which mix of outcomes would meaningfully move these folks forward

Don't just pick what you know or like, research what has worked for others.

3.

Understand the Logic Model risks of each intervention type

Understand the limitations of each intervention so you can make a mix of interventions that fills in each other's gaps.

4.

Understand the average costs to implement effective interventions

Understand what it has cost others to implement an intervention.

5.

What's the market size of a problem in an area?

Try to size the problem so you know at what scale you'll need to work at.

6.

How much market share of the problem are you addressing, or would like to address?

Be realistic with how much of the problem you want to solve within the scope of your other goals.

7.

Who are your investing partners?

Know who else is working in the space and coordinate investment with them.

8.

Find and scale proven solutions providers locally

Don't put the burden on the service providers to make their case with book reports, leverage orgs that are doing what works already in a place and help them scale.

9.

Track dose and fidelity KPIs

Big Data isn't helpful for every problem. Understand the key performance indicators and outputs that drive them. Track those in real time and continuously improve them.

Example: Potential priority investment opportunities based on outcome goals

		Investment Opportunity
Goal	Generating the largest increase in earnings	▪ Career and Technical Education (dual enrollment in high school) ▪ Cognitive behavioral therapy for adults ▪ Scholarships (4-year institutions) ▪ Tutoring ▪ STEM summer programs
	Generating the largest improvements in health	▪ Cognitive behavioral therapy for adults ▪ Cognitive behavioral therapy for children and adolescents ▪ Youth Development / Work Experience
	Generating a greater number of outcomes	▪ Food bank ▪ Job training
	Generating a greater SROI	▪ CollegeBound ▪ Cognitive behavioral therapy for adults ▪ Career and Technical Education (high school / dual enrollment) ▪ Housing assistance without services for formerly incarcerated ▪ STEM courses ▪ Tutoring
	Promising activities not yet monetized but likely to support additional value-creation	▪ Conferences and network building ▪ K-12 outreach ▪ Mentorship

Impact Storytelling

- **Audience:** Who needs to hear your impact story? (Investors, customers, employees, regulators)
- **Value Proposition:** What unique value are you creating for whom?
- **Process:** How can you consistently and authentically communicate your impact?
- **Monetization:** How does your impact drive your financial sustainability and reduce risk?

Your Role as a "Next Economy" Leader

- **Challenge assumptions:** Redefine success.
- **Think in systems:** Understand the interconnectedness.
- **Measure what matters:** Go beyond the balance sheet.
- **Tell a better story:** Use the right amount of data and narrative to inspire action.

Let's Measure What Matters

Partner with Ecotone to translate your impact into measurable value.

We help organizations align purpose with performance — building strategies that create social, environmental, and financial returns. Let's start a conversation about how your investments can generate measurable outcomes and long-term competitive advantage.

Explore how Ecotone's impact methodology can be tailored to your organization's goals.

impact@ecotone-partners.com
