

MindCraft

We help high school students who think they are bad at math by mapping the real gap. Then a college tutor starts there, not page one.

Akshat Koirala · Blake Kell · Twin Cities ACT Math

The hour keeps failing.

STUDENT

"I am not a math person."

Avoidance is armor.

PARENT

Pays for tutoring.

Still the same Sunday fight.

TUTOR

40 minutes of detective work.

Finds the gap as time runs out.

Next week they start over. Nobody drew the map.

Answers got cheap. The map did not.

CB INSIGHTS

Two thirds of product-market fit failures were early-stage companies that never found a market.

USERS ARE NOT ALWAYS BUYERS

Student uses.
Parent buys.

We design for the student.
We sell clarity to the parent.

Diagnosis

Which misconception is blocking them

Human start

A tutor who begins on that spot

Wedge

Twin Cities ACT Math families first

Map first. Tutor second.

1

Gap scan

Confidence across ACT concepts.
No shame grade. Chart the fog.

2

Living map

Weak spot lights up.
Practice has a reason.

3

College tutor

Starts on the gap.
Never page one again.

MVP on purpose. Not every feature. The loop that must work first. (Pareto / Ryan 2026)

Find where math lost them.

Our assessment instrument. Confidence in. Map out. Before session one.

How confident are you with each of these?

Self-report only. Tap and move on.

🔥

Warm-ups

The fluency you lean on when everything else gets noisy.

Fractions and Decimals

Parts of a whole, switch freely between fractions and...

Ratios and Proportions

A ratio is a fraction, so set up two equal fractions and cross...

Order of Operations

Parentheses first, then powers, then multiply/divide, then...

Basic One-Variable...

Balance both sides until the unknown stands alone.

Number Properties,...

Odd/even, primes, factors, multiples, and divisibility patterns.

Units, Measurement,...

Unit conversion is always multiplication or division: set up the...

Algebraic Structure and...

Every algebra step is one of three moves: add/subtract...

⌘

Algebra

Equations, functions, and the moves that unlock most ACT items.

Linear Equations

Variables to the first power only. Goal: isolate the variable.

Basics of Functions

$f(x)$ is a machine: put x in, get output out. Composition = chain...

Linear Inequalities

Same as equations, with one critical exception: flip the sig...

Systems of Linear Equations

Substitution or elimination. Elimination is almost always faste...

Exponent Rules

Six rules. Memorize all six. They appear constantly.

Polynomial Operations

FOIL to expand, factor to simplify. Remainder theorem shortcuts...

Factoring Polynomials

Factor out GCF first. Then recognize the pattern.

Radical Expressions

Simplify roots the way you simplify fractions, clean the inside first.

Quadratic Equations

Three methods: factor, quadratic formula, completing the squar...

Exponential Functions

Growth and decay curves that multiply, not add.

Sequences

Find the next...

△

Geometry

Shapes, angles, and space: draw it, then name it.

Right Triangle Geometry

Pythagorean theorem + special triangles solve almost every...

Trigonometry Basics

SOH-CAH-TOA is your best friend, so memorize it cold.

Lines and Angles

Parallel lines cut by a transversal create eight angles, but only...

Triangles and Congruence

Same shape and size: matching sides and angles tell the story.

Geometry of Circles

All circle questions come back to the radius and the centra...

Area and Volume

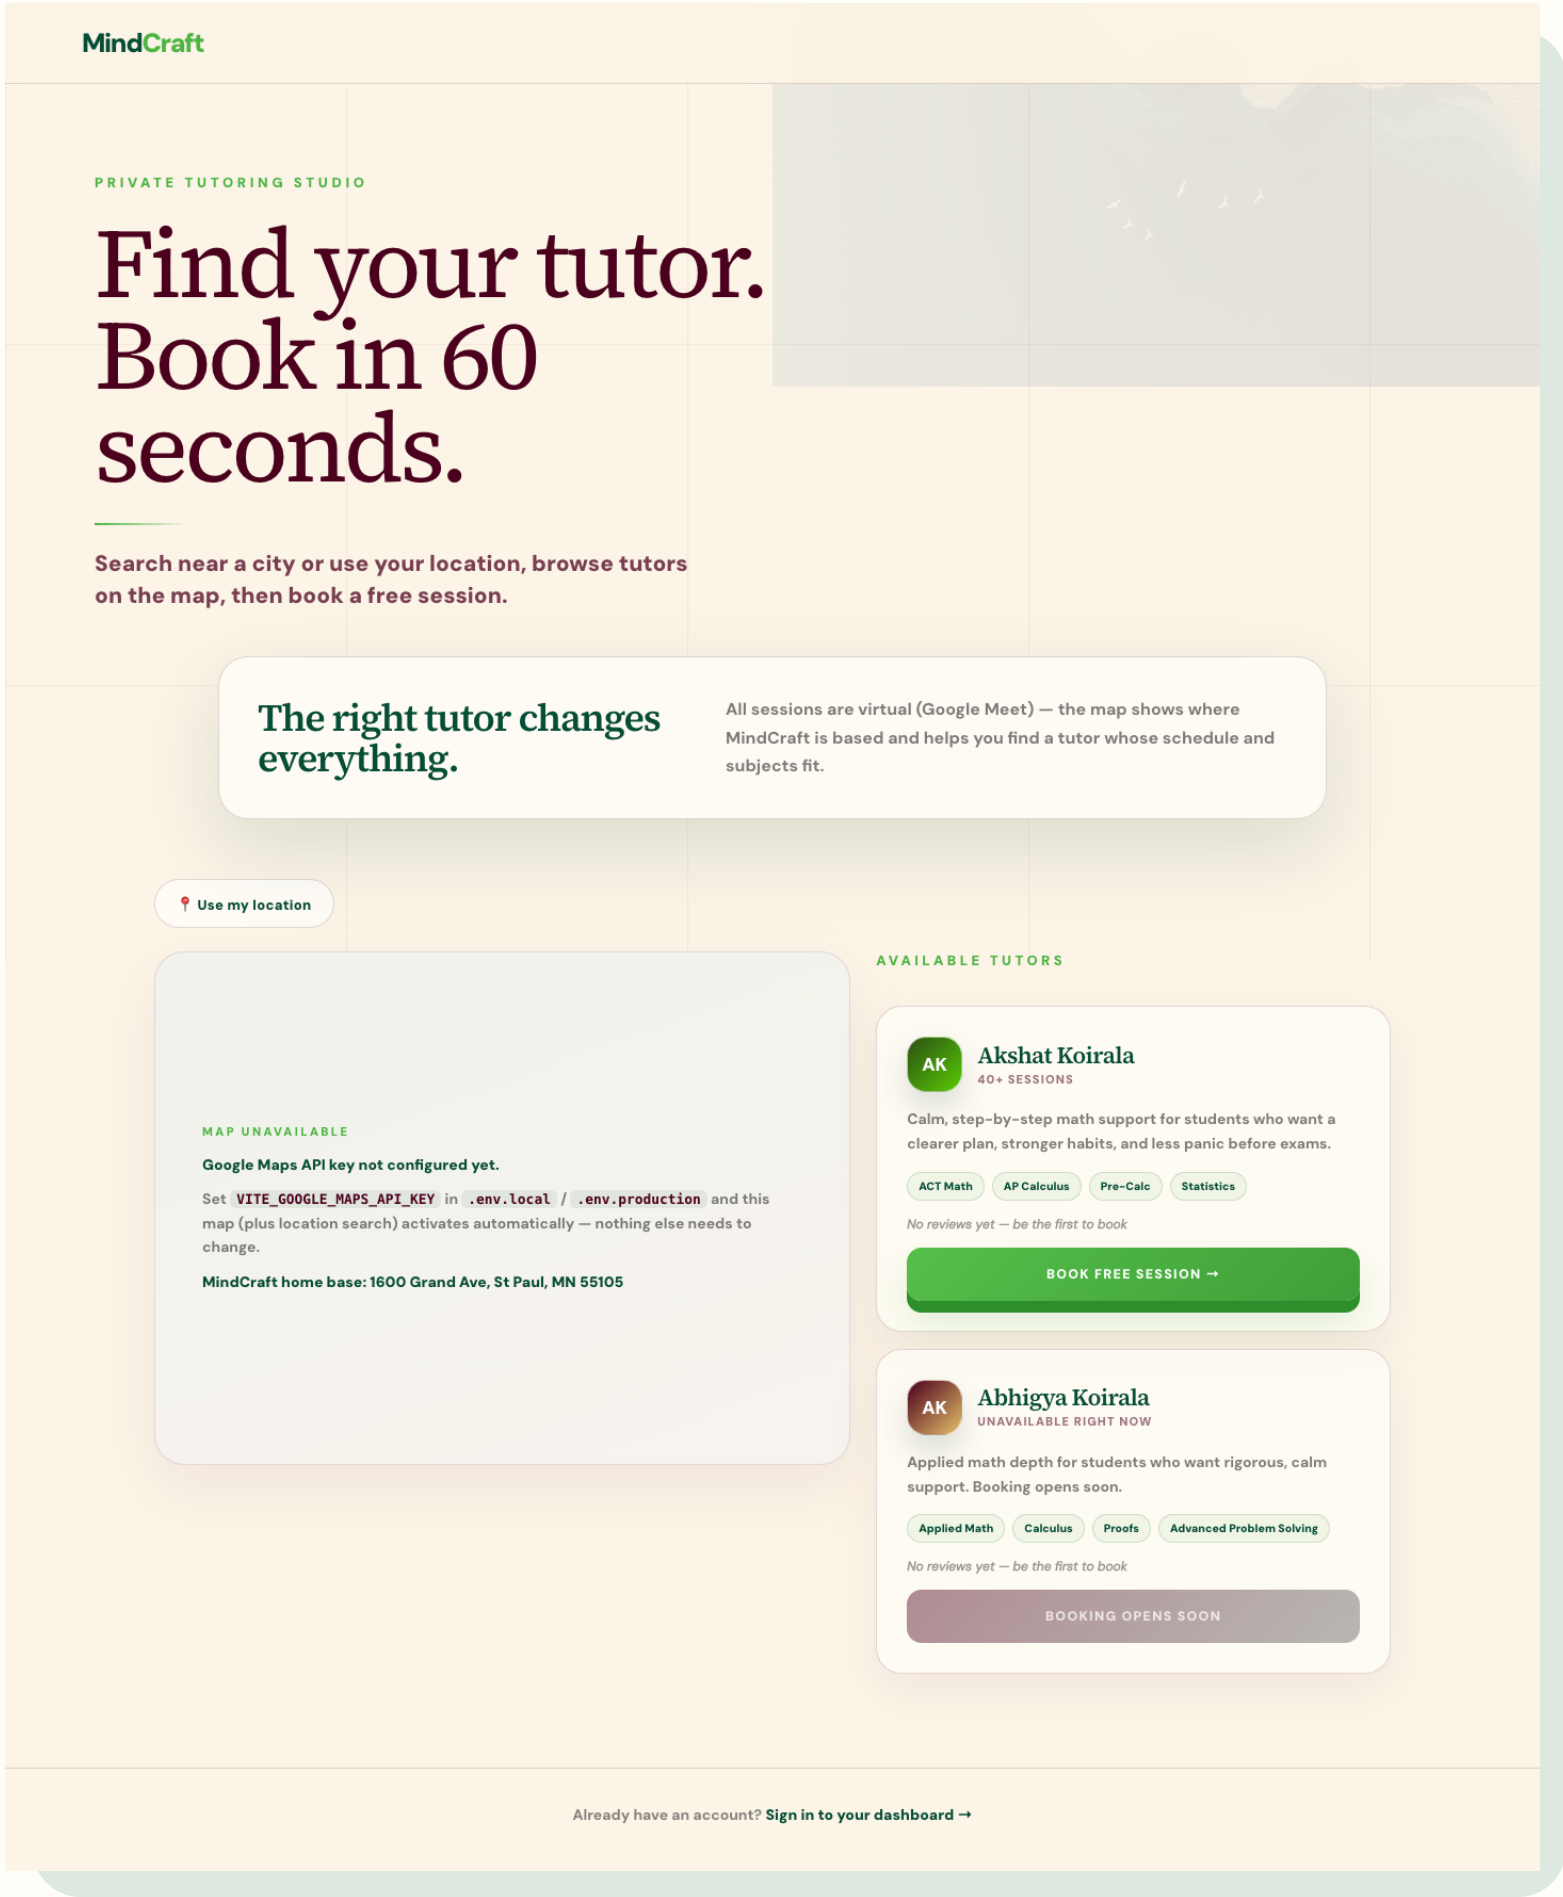

Know your formulas cold. The ACT provides none of them.

Geometric Transformations

Slide, flip, and turn: the figure moves, the measures stay.

MindCraft

A human tutor, already briefed.

42

THE ASK

Know someone we should talk to?

- A parent with a 10th to 12th grader staring at ACT Math
- A counselor who hears "I am not a math person" every week
- A college tutor who wants hours that are not detective work

joinmindcraft@gmail.com

MindCraft · map the gap · college tutor starts there
